Issued: February 4, 2009

Responses to questions submitted on January 30, 2009, by Tony Lin, Esquire, Pillsbury, Winthrop, Shaw Pittman, LLP.

1. On page 1 of the RFP's Executive Summary, the EBS opportunity is estimated as 5.6 million people. Since the current population of South Carolina is about 4.6 million, please provide information on where the additional 1 million POPs came from:

a. Is the estimate of 5.6 million POPs based on out-of-state connectivity?

SCEBSC response:

The 5.6 million population figure was calculated by Kessler & Gehman consulting engineers using 2005 Census data for the area inside the outer boundary of all of the GSAs, which include areas of South Carolina, North Carolina and Georgia. You should refer to Attachment B (i) "Statewide map of all GSAs" that is included with the RFP for a depiction of this area.

b. Or does this figure include an assumption of future population growth?

SCEBSC response:

See above response.

2. Regarding RFP page 3 of 11, Educational Requirements. The channel transition plan detailed in the chart on page 2 of 11 sets aside 7 mid-band frequency channel (A4 through G4) for EBS usage. Then on page 3, the RFP requires licensors to also provide 5% of capacity and up to 20 hours per week per channel of their spectrum for EBS educational use. Please clarify this requirement as to the amount of spectrum, the number of hours per week that must be provided for educational services and the minimum channel capacity to be reserved.

SCEBSC response:

The RFP seeks information about the willingness of Respondents to lease from 75% up to 95% of the capacity. Currently, SCETV plans to migrate its existing analog video operations into the midband and the RFP seeks information about the extent to which Respondents will assist SCETV in making this transition to the new bandplan. SCETV is open to considering other ways to make the transition to the new bandplan so long as it can meet its obligations to the FCC. As described in the RFP and in the FCC rules, the FCC requires EBS licensees to meet certain minimum use requirements (20 hours per channel per week), and reserve 5% of its capacity for educational use. The RFP also seeks information from Respondents about their willingness to assist SCETV in meeting the substantial service test under FCC rules. This could be accomplished through a combination of commercial and educational services.

3. On page 3 of 11, the RFP seeks proposals from the successful bidder to transition ETV spectrum. Please provide details of what type and how much ETV equipment needs to be transitioned and where this equipment is located.

SCEBSC response:

SCETV has advised that it has not yet surveyed all transmit and receive site locations associated with the utilization of the 67 EBS licenses for its legacy analog video services. It anticipates that it may have to purchase replacement equipment and new downconverters for some of its locations but that some equipment could be returned or re-utilized. SCETV estimates that the transition of a single analog channel into the midband for all 67 licenses would cost between \$450,000 and \$950,000.

4. Re subparagraph (iii)(A) on page 4 of 11: Please clarify this clause. The wording of the following phrase is ambiguous: "for mobile service, where coverage is provided to at least 75% of the geographic area of at least 30% of the rural areas within its service area."

SCEBSC response:

This is the language in the FCC rule. In other words, mobile service coverage must be provided to at least 75%, of at least 30%, of the rural areas contained within the GSA.

a. Please define/clarify what a rural area is?

SCEBSC response:

For purposes of the FCC rule, "rural" is defined in sub-paragraph (iii) on page 4.

5. Re subparagraph (iii)(B) on page 4 of 11: Please clarify the clause "... for fixed services, where the licensee has constructed at least one end of a permanent link in at least 30% of the rural areas within its licensed area."

a. Please clarify what is meant by the term "permanent link"?

SCEBSC response:

The FCC has not defined "permanent" for purposes of this rule.

6. Re paragraph 4 on page 6 of 11: Please clarify the 75% lease option - if the winning bid is for 75%, what will the Licensee do with the remaining 25% spectrum that is not leased?

SCEBSC response:

If it is decided that SCETV will make the transition by migrating its analog video service into the midband, the 25% will be allocated for that service. FCC Rules allow SCETV to offer any lawful service over its retained capacity, including public, governmental and educational services so long as it meets its educational mission.

7. Re Exhibit 1 map. Several of the BTAs border on adjacent states, either NC or GA. Is it permissible to extend coverage beyond SC state lines? Examples include Orangeburg, extending into Augusta, GA and Myrtle Beach, extending into the coastal NC areas north of Myrtle Beach.

SCEBSC response:

Service may be provided anywhere within a GSA consistent with FCC Rules regardless of what state the GSA is within.

8. What current SCETV or other State-owned radio towers and other vertical real-estate assets will be available to bidders? Bidders will need specific long-lat details, tower heights, etc.

SCEBSC response:

The most current and complete list of SCETV towers available is attached. It is understood that the availability and suitability of any particular tower site is a function of many variables.

9. Can a bidder lease this 2.5 GHz spectrum and then satisfy the state's rural service requirements with a non-2.5 GHz solution?

SCEBSC response:

This has not yet been decided. The establishment of a commercial service milestone over its spectrum is one way SCETV can meet the FCC substantial service test in May 2011. If SCETV is otherwise able to meet the FCC substantial service test using its spectrum, such as through use of analog video in the midband, the Commission may or may not require the successful respondent(s) to meet a state-imposed commercial service milestone or it may decide to allow such service milestone to be met by other technologies.
